Prototypes

User Interface Prototypes

Prototypes help visualise the system's design and functionality:

- Low-Fidelity Prototypes: quick sketches or wireframes to explore design concepts.
- High-Fidelity Prototypes: detailed digital mockups that closely resemble the final product, useful for usability testing.

The low-fidelity and high-fidelity prototypes for each page are shown side-by-side to better illustrate the design process of transitioning from low-fidelity to high-fidelity.

Login Page

The process of designing the login interface has gone smoothly, as shown in Figures 1 and 1.1. This page will provide the user the ability to input their username and password and clicking the LOGIN button will process the login request.

To enhance the accessibility of the tool, a short overview video will be provided for all users. Moreover, the links below the LOGIN button are a link towards the registration page and a link towards the forgot password page. The button, indicated by the sun logo, besides the LOGIN button has a special functionality, allowing a user to adjust the brightness of the background (UX Accessibility).

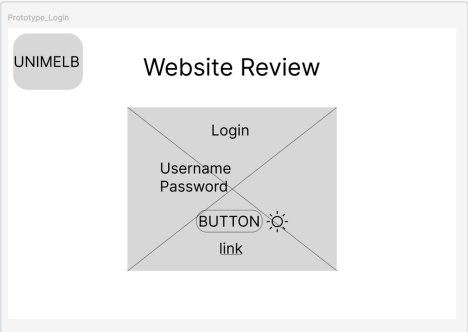

Figure 1

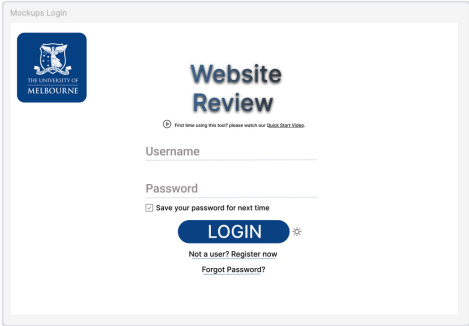

Figure 1.1

Search Page

After the user has logged in, the tool will display the initial search page. By clicking the SEARCH button shown in Figures 2 and 2.1, the user would be taken to the next page (Figures 3 and 3.1) where user can specify whether they would like to search for links or text. The two buttons below the SEARCH button in Figure 2 have been moved to the results page. This page is designed to act as a transition page between the login page and the search page with searching functionality. Users can also spend time exploring the basic functionality of this tool (as more features are being designed).

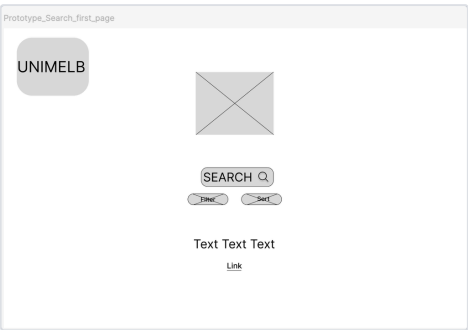

Figure 2

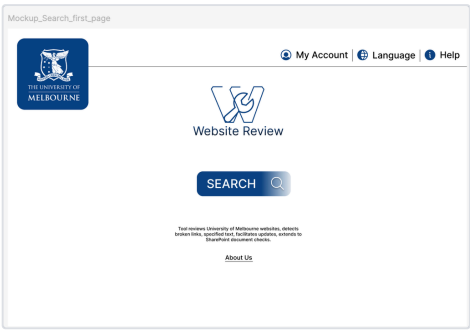

Figure 2.1

The figures below (Figures 3 and 3.1) show the search page with actual searching functionality – the user will input the URL they want to search by clicking LINK button or using the text search feature shown in Figures 4 and 4.1.

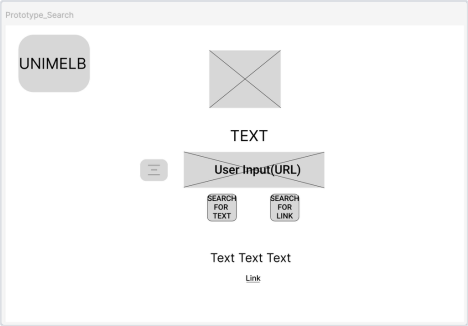

Figure 3

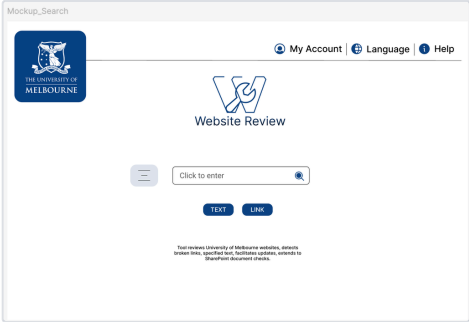

Figure 3.1

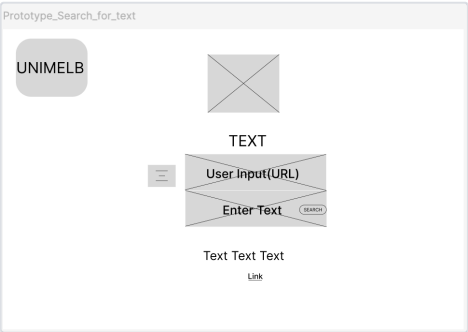

Figure 4

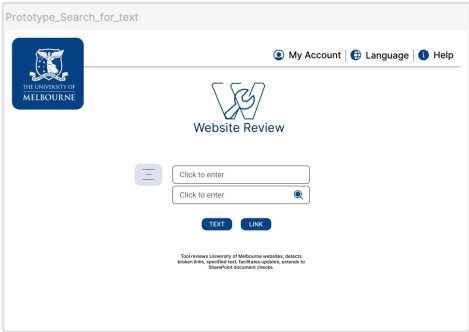

Figure 4.1

This dropdown page on the left of the user input box in Figures 3 and 4 will be designed as a functional button that contains several predefined (or highly used) links. This is opposed to the search history which will show up in the input box as a dropdown view.

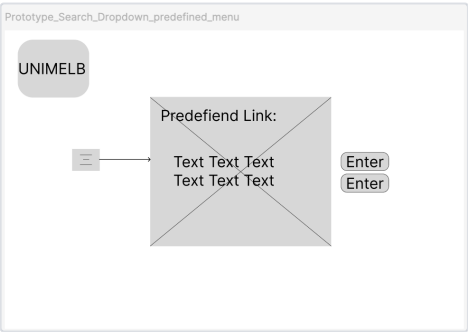

Figure 5

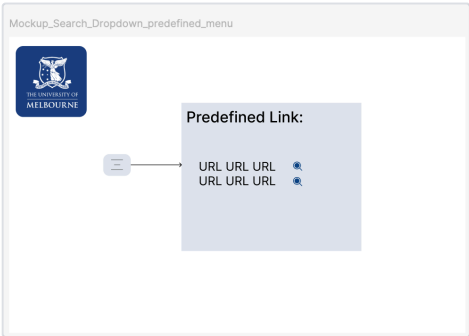

Figure 5.1

Result Page

The current design of the results page was created based on advice from the client to present results as a table and contains several functionalities. Users can adjust the results with the Filter and Sort buttons. There will also be buttons that allow the user to download or share the results.

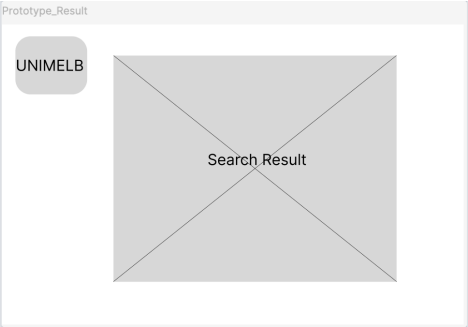

Figure 6

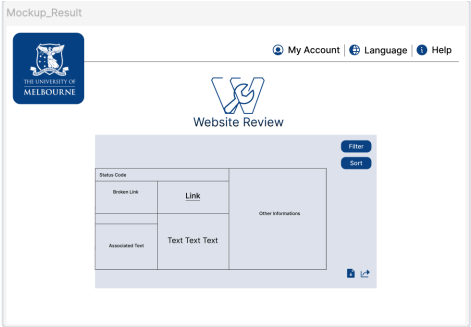

Figure 6.1

Registration Page:

The figure below (Figure 7) shows the sign-up page of the website review tool. This includes fields where a new user can enter their username, email address, password, and password confirmation. Each field is marked as required. The design aims to be clean and straightforward, emphasising usability and easy navigation for users looking to create an account.

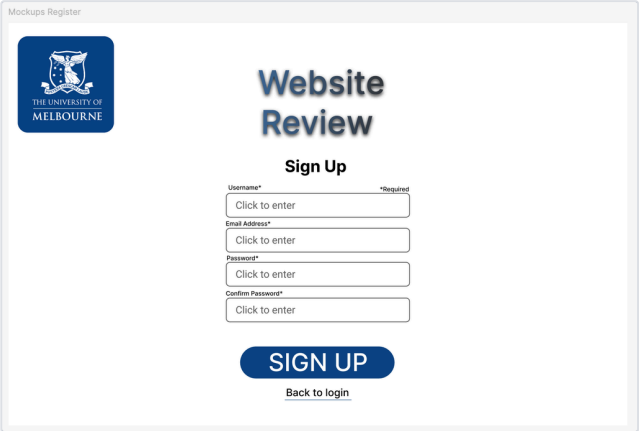

Figure 7

Forgot Password Page:

The forgot password page(figure 8) features a single field where users are prompted to enter their email address, which is linked to their account. The page instructs users that once their username is verified, they will receive an email with instructions on how to reset their password. After that, the user can reset the password via a link sent to the email.

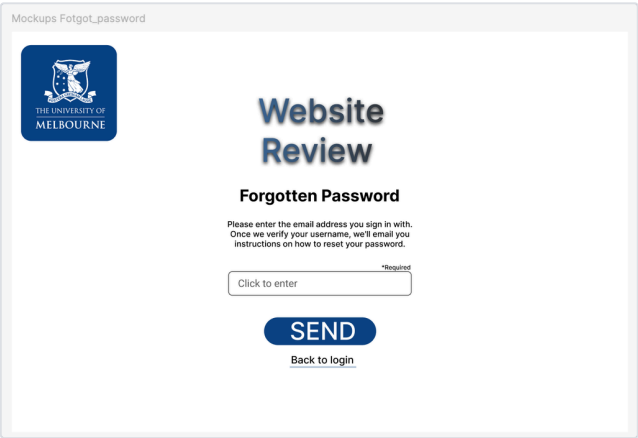

Figure 8

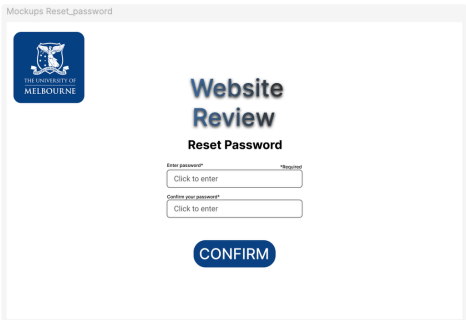

Figure 9

All of the above user interfaces may be further developed during our production process and may be differ from the final product.
